3 globus gssapi gsi Module Documentation

3.1 Functions for manipulating a buffer set

Create Empty Buffer Set

```
OM_uint32 gsscreateemptybuffer_set(OM_uint32 minor_status, gssbuffer_sett buffer_set)
```

Add Buffer

```
OM_uint32 gssaddbuffer_setmember(OM_uint32 minor_status, const gssbuffer_t memberbuffer, gssbuffer_sett buffer_set)
```

Free Buffer Set

OM_uint32 [gss_releasebuffer_set](#)(OM_uint32 minor_status, gssbuffer_sett buffer_set)

3.1.1 Function Documentation

3.1.1.1 OM_uint32 [gss_create_empty_buffer_set](#)(OM_uint32 minor_status gssbuffer_sett buffer_set)

Create a empty buffer set.

This function allocates and initializes a empty buffer set. The memory allocated in this function should be freed by a call to [gssreleasebuffer_set](#).

Parameters:

minor_status The minor status returned by this function. This parameter will be 0 upon success.

buffer_set Pointer to a buffer set structure.

Returns:

GSSS_COMPLETE upon success GSSFAILURE failure

See also:

[gssaddbuffer_setmember](#), [gss_releasebuffer_set](#)

3.1.1.2 OM_uint32 [gss_add_buffer_set_member](#)(OM_uint32 minor_status const gssbuffer_t memberbuffer, gssbuffer_sett buffer_set)

Add a buffer to a buffer set.

This function allocates a new [gssbuffer_t](#), initializes it with the values in the memberbuffer parameter.

Parameters:

minor_status The minor status returned by this function. This parameter will be 0 upon success.

memberbuffer Buffer to insert into the buffer set.

buffer_set Pointer to a initialized buffer set structure.

Returns:

GSSS_COMPLETE upon success GSSFAILURE failure

See also:

[gss_createemptybuffer_set](#), [gss_releasebuffer_set](#)

3.1.1.3 OM_uint32 [gss_releasebuffer_set](#)(OM_uint32 minor_status gssbuffer_sett buffer_set)

Free all memory associated with a buffer set.

This function will free all memory associated with a buffer set. Note that it will also free all memory associated with the buffers int the buffer set.

Parameters:

minor_status The minor status returned by this function. This parameter will be 0 upon success.

buffer_set Pointer to a buffer set structure. This pointer will point at a NULL value upon return.

Returns:

`GSSS_COMPLETE` upon success `GSS$FAILURE` failure

See also:

[gss.createemptybuffer_set](#), [gss.addbuffer_setmember](#)

3.2 GSI GSS-API Constants

3.3 Activation

Globus GSI GSSAPI uses standard Globus module activation and deactivation.

De nes

```
#de ne GLOBUS_GSLGSSAPIMODULE
```

3.3.1 Detailed Description

Globus GSI GSSAPI uses standard Globus module activation and deactivation.

Before any Globus GSI GSSAPI functions are called, the following function should be called:

```
globus_module_activate(GLOBUS_GSI_GSSAPI_MODULE)
```

This function returns `GLOBUS$UCCESS` if Globus GSI GSSAPI was successfully initialized, and you are therefore allowed to subsequently call Globus GSI GSSAPI functions. Otherwise, an error code is returned, and Globus GSI GSSAPI functions should not subsequently be called. This function may be called multiple times.

To deactivate Globus GSI GSSAPI, the following function should be called:

```
globus_module_deactivate(GLOBUS_GSI_GSSAPI_MODULE)
```

This function should be called once for each time Globus GSI GSSAPI was activated.

Note that it is not mandatory to call the above functions.

3.3.2 De ne Documentation

3.3.2.1 #de ne GLOBUS_GSI_GSSAPIMODULE

Module descriptor.

3.4 GSS Req Flags

These macros set the REQUESTED type of context - these should be set (or not) in the contexts (~~req~~ in the context's ret args if acceptseccontext is being called).

[NOHEADER]

```
#de ne GSSC_GLOBUS_DELEGATE_LIMITED_PROXY_FLAG 4096
```

[NOHEADER]

```
#de ne GSSC_GLOBUS.ACCEPT_PROXY_SIGNED_BY_LIMITED_PROXY_FLAG 32768
```

De nes

```
#de ne GSSC_GLOBUS.DONT_ACCEPT_LIMITED_PROXY_FLAG 8192
```

3.4.1 Detailed Description

These macros set the REQUESTED type of context - these should be set (or not) in the contexts (~~ret~~ in the context's ret args if acceptseccontext is being called).

3.4.2 De ne Documentation

3.4.2.1 #de ne GSSC_GLOBUS.DONT_ACCEPT_LIMITED_PROXY_FLAG 8192

Set if you don't want a context to accept a limited proxy.

If this ag is set, and a limited proxy is received, the call will not be successful and the context will not be set up

3.4.2.2 #de ne GSSC_GLOBUS.DELEGATE_LIMITED_PROXY_FLAG 4096

Set if you wan the delegated proxy to be a limited proxy.

3.4.2.3 #de ne GSSC_GLOBUS.ACCEPT_PROXY_SIGNED_BY_LIMITED_PROXY_FLAG 32768

Set if you want to accept proxies signed by limited proxies.

Deprecated:

We now accept proxies signed by limited proxies if they are limited or independent.

3.5 GSS Ret Flags

These macros set the RETURNED context type - these will be be set (or not) in the contexts (~~ret~~ in the context's ret args)

[NOHEADER]

```
#de ne GSSC_GLOBUS.RECEIVED.LIMITED_PROXY_DURING_DELEGATION_FLAG 4096
```

De nes

```
#de ne GSSC_GLOBUS.RECEIVED.LIMITED_PROXY_FLAG 8192
```

3.5.1 Detailed Description

These macros set the RETURNED context type - these will be be set (or not) in the contexts (~~ret~~ in the context's ret args)

3.5.2 De ne Documentation

3.5.2.1 #de ne GSSC_GLOBUS_RECEIVED_LIMITED_PROXY_FLAG 8192

If the proxy received is a limited proxy, this `ag` will be set in the returned context `ags` (`res`).

3.5.2.2 #de ne GSSC_GLOBUS_RECEIVED_LIMITED_PROXY_DURING_DELEGATION_FLAG 4096

If the proxy received is a limited proxy received during delegation, this `ag` is set in the returned `ags`.

4 globus gssapi gsi Page Documentation

4.1 Deprecated List

Global **GSSC_GLOBUS_LIMITED_PROXY_MANY_FLAG** We now accept proxies signed by limited proxies if they are limited or independent.

Global **GSSC_GLOBUS_ACCEPT_PROXY_SIGNED_BY_LIMITED_PROXY_FLAG** We now accept proxies signed by limited proxies if they are limited or independent.
