1   Job Manager Setup

This package contains the setup package for the job manager program. The setup-globus-gram-job-manager script must be run to con gure the job manager application. In addition, a scheduler-speci c job manager service package must be installed and con gured to use GRAM to submit jobs to a scheduler.

1.1   Options to setup-globus-gram-job-manager

-state-dir=DIR

   Set the path of a directory where state les will be stored. These les will be created when a job is submitted
   with (save_start = yes)   in the job request RSL. This directory will be created by the setup package if it
   isn't present. It must be located on a local (non-NFS or AFS) lesystem in order for this feature to work. If the
   directory is not local, then the script will emit an error and exit without con guring the job manager. The default
   directory is$GLOBUS_LOCATION/tmp
