Chapter 1

Class Index

1.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

FIOAttribute	6
FIOClient	7
FIOMessage	8
FIORegistration	11
FIOService	12
HTTP_FIO	14
nf_object_response	15
nf_response	16
pSafeObject	19
const_pFIOObject	5
pFIOObject	17
pFIOServiceRemote	18
SafeObject	20
FIOObject	9
FIOServiceRemote	13
XMLNode	21

Chapter 2

Class Index

2.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

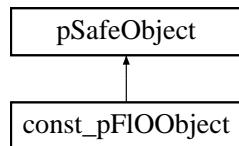

const_pFIOObject	5
FIOAttribute	6
FIOClient (Interface to remote service)	7
FIOMessage (Message sent between services for notification)	8
FIOObject	9
FIOREgistration (Registration request)	11
FIOService (Kind of main class. Represents local service itself)	12
FIOServiceRemote (Interface to remote service)	13
HTTP_FIO (FIO service as seen by connected client (interface to FIOService class))	14
nf__object_response	15
nf__response	16
pFIOObject	17
pFIOServiceRemote	18
pSafeObject	19
SafeObject	20
XMLElement	21

Chapter 3

Class Documentation

3.1 const_pFLOObject Class Reference

Inheritance diagram for const_pFLOObject::

Public Member Functions

- `const_pFLOObject (const FLOObject &o)`
- `const_pFLOObject (const FLOObject *o)`
- `const_pFLOObject (const const_pFLOObject &p)`
- `const_pFLOObject (const pFLOObject &p)`
- `const FLOObject & operator* (void) const`
- `const FLOObject * operator-> (void) const`

The documentation for this class was generated from the following file:

- `pointers.h`

3.2 FIOAttribute Class Reference

Public Member Functions

- `FIOAttribute (const std::string &name, bool multi=false)`
- `FIOAttribute (const std::string &name, const std::string &value, bool multi=false)`
- `FIOAttribute (const std::string &name, const std::vector< const std::string > &value)`
- `const std::string & name (void) const`
- `const std::string & value (unsigned int n=0) const`
- `void value (const std::string &v)`
- `bool add (const std::string &v)`
- `bool operator== (const std::string &n) const`
- `void serialize (XMLNode &x) const`

Static Public Member Functions

- static `FIOAttribute * deserialize (const XMLNode &x)`

The documentation for this class was generated from the following file:

- `attribute.h`

3.3 FIOClient Class Reference

Interface to remote service.

```
#include <client.h>
```

Public Member Functions

- **FIOClient** ([pFIOServiceRemote](#) s)
- **FIOClient** ([FIOServiceRemote](#) &s)
- bool [registr](#) ([FIOService](#) &s)
- bool [notify](#) ([std::list< FIOMessage >](#) &msgs)

3.3.1 Detailed Description

Interface to remote service.

The documentation for this class was generated from the following file:

- client.h

3.4 FIOMessage Class Reference

Message sent between services for notification.

```
#include <message.h>
```

Public Member Functions

- `FIOMessage (FIOObject::action_t t)`
- `FIOMessage (const FIOObject &o, FIOObject::action_t t)`
- `void serialize (std::string &msg)`
- `void operator= (FIOObject::action_t t)`
- `bool operator== (const std::string &id) const`
- `bool operator== (const FIOObject &o) const`
- `bool operator== (const_pFIOObject p) const`
- `FIOObject::action_t type () const`
- `const_pFIOObject object () const`

Static Public Member Functions

- static `FIOMessage * deserialize (const std::string &msg)`

3.4.1 Detailed Description

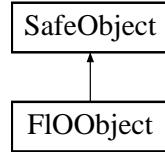

Message sent between services for notification.

The documentation for this class was generated from the following file:

- `message.h`

3.5 FIOObject Class Reference

#include <object.h> Inheritance diagram for FIOObject::

Public Types

- enum `type_t` { **undefined**, **reference**, **ordinary** }
- enum `action_t` { **unknown**, **created**, **updated**, **deleted** }

Public Member Functions

- `FIOObject (const std::string &id, type_t t=undefined)`
- `FIOObject (FIOService &service, const std::string &id, type_t t=undefined)`
- `const std::string & id (void) const`
- `type_t type (void) const`
- `FIOService * service (void) const`
- `FIOService * service (FIOService *s)`
- `std::vector< FIOAttribute > & attributes (void)`
- `virtual operator bool (void)`
- `virtual bool operator! (void)`
- `virtual void serialize (XMLNode &x) const`
- `virtual void serialize (XMLNode &x, FIMessage &m) const`
- `virtual void serialize (std::string &msg) const`
- `virtual void serialize (std::string &msg, FIMessage &m) const`
- `virtual void notification (FIMessage &msg, pFIOServiceRemote rsrv)`
- `virtual void maintain (void)`
- `virtual void notification (FIOService &srv, FIMessage &msg, pFIOServiceRemote rsrv) const`

Static Public Member Functions

- `static void Register (deserializer_t sr)`
- `static FIOObject * deserialize (const XMLNode &x)`
- `static FIOObject * deserialize (const XMLNode &x, FIMessage &m)`
- `static FIOObject * deserialize (const std::string &msg)`
- `static FIOObject * deserialize (const std::string &msg, FIMessage &m)`

Protected Member Functions

- `FIOObject (const FIOObject &o)`

Protected Attributes

- std::vector< FIOAttribute > attrs_

Friends

- FIOObject * deserialize_object (const XMLNode &x)

3.5.1 Detailed Description

Class to represent both reference and ordinary objects with specific methods virtual. Real object reimplements one or another set of them.

3.5.2 Member Function Documentation

3.5.2.1 virtual void FIOObject::serialize (XMLNode & x, FIOMessage & m) const [virtual]

Convenience method to convert object into XML tree Real object can reimplement it instead of one using string.

3.5.2.2 virtual void FIOObject::serialize (XMLNode & x) const [virtual]

Convenience method to convert object into XML tree. Real object can reimplement it instead of one using string.

The documentation for this class was generated from the following file:

- object.h

3.6 FIORegistration Class Reference

Registration request.

```
#include <message.h>
```

Public Member Functions

- **FIORegistration** (**FIOService** &s)
- **FIOService** & **service** (void)
- bool **operator==** (const **FIOService** &s) const

3.6.1 Detailed Description

Registration request.

The documentation for this class was generated from the following file:

- message.h

3.7 FIOService Class Reference

Kind of main class. Represents local service itself.

```
#include <service.h>
```

Public Member Functions

- **FIOService** (const std::string &url, const std::string &path)
- **operator bool** (void) const
- bool **operator!** (void) const
- const std::string & **url** (void) const
- void **add** (pFIOObject o)
- void **add** (pFIOServiceRemote s)
- void **notify** (const FIOMessage &m)
- void **notification** (FIOMessage &msg, pFIOServiceRemote &srv)
- pFIOServiceRemote **service** (const std::string &id)
- void **registr** (pFIOServiceRemote s)
- pFIOObject **find** (std::string id)
- void **maintain** (void)

3.7.1 Detailed Description

Kind of main class. Represents local service itself.

3.7.2 Member Function Documentation

3.7.2.1 void FIOService::notify (const FIOMessage & m)

Inform registered services about changes (calls corresponding methods of hadled objects)

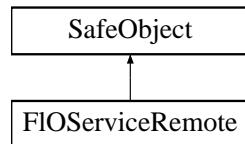

The documentation for this class was generated from the following file:

- service.h

3.8 FIOServiceRemote Class Reference

Interface to remote service.

```
#include <service.h>Inheritance diagram for FIOServiceRemote::
```

Public Member Functions

- `FIOServiceRemote` (const std::string &`url`, const std::string &`id`)
- const std::string & `url` (void)
- const std::string & `id` (void)
- void `notify` (const [FIMessage](#) &`m`)
- void `registr` ([FIOService](#) &`s`)
- void `maintain` (void)

3.8.1 Detailed Description

Interface to remote service.

The documentation for this class was generated from the following file:

- `service.h`

3.9 HTTP_FIO Class Reference

FIO service as seen by connected client (interface to [FIOService](#) class).

```
#include <flo.h>
```

Public Member Functions

- **HTTP_FIO** (HTTP_Connector *c, [FIOService](#) &srv)
- virtual HTTP_Error **get** (const char *uri, int &keep_alive)
- virtual HTTP_Error **put** (const char *uri, int &keep_alive)
- virtual void **soap_methods** (void)

Friends

- int **nf_notification** (struct soap *, int, char **, struct [nf_response](#) &)
- int **nf_registration** (struct soap *, char *, char *, char *, struct [nf_response](#) &)
- int **nf_add** (struct soap *, int, char **, struct [nf_response](#) &)
- int **nf_find** (struct soap *, char *, char *, struct [nf_object_response](#) &)

3.9.1 Detailed Description

FIO service as seen by connected client (interface to [FIOService](#) class).

The documentation for this class was generated from the following file:

- flo.h

3.10 nf__object_response Struct Reference

Public Attributes

- int **error_code**
- int **sub_error_code**
- char * **error_description**
- int **_size_obj**
- char ** **obj**

The documentation for this struct was generated from the following file:

- flo_soap.h

3.11 nf__response Struct Reference

Public Attributes

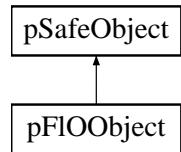

- int **error_code**
- int **sub_error_code**
- char * **error_description**

The documentation for this struct was generated from the following file:

- flo_soap.h

3.12 pFlOObject Class Reference

Inheritance diagram for pFlOObject::

Public Member Functions

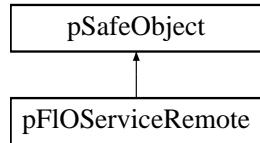

- `pFlOObject (FIOObject &o)`
- `pFlOObject (FIOObject *o)`
- `pFlOObject (const pFlOObject &p)`
- `FIOObject & operator* (void) const`
- `FIOObject * operator-> (void) const`

The documentation for this class was generated from the following file:

- `pointers.h`

3.13 pFIOServiceRemote Class Reference

Inheritance diagram for pFIOServiceRemote::

Public Member Functions

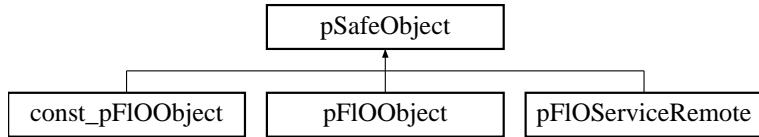

- **pFIOServiceRemote** ([FIOServiceRemote](#) &o)
- **pFIOServiceRemote** ([FIOServiceRemote](#) *o)
- **pFIOServiceRemote** (const [pFIOServiceRemote](#) &p)
- [FIOServiceRemote](#) & **operator*** (void) const
- [FIOServiceRemote](#) * **operator->** (void) const

The documentation for this class was generated from the following file:

- pointers.h

3.14 pSafeObject Class Reference

Inheritance diagram for pSafeObject::

Public Member Functions

- [pSafeObject \(SafeObject &o\)](#)
- [pSafeObject \(SafeObject *o\)](#)
- [pSafeObject \(const pSafeObject &p\)](#)
- [SafeObject & operator* \(void\) const](#)
- [SafeObject * operator-> \(void\) const](#)
- [void operator= \(SafeObject &o\)](#)
- [void operator= \(SafeObject *o\)](#)
- [void operator= \(const pSafeObject &p\)](#)
- [operator bool \(void\) const](#)
- [bool operator! \(void\) const](#)
- [bool operator== \(const pSafeObject &p\) const](#)
- [bool operator!= \(const pSafeObject &p\) const](#)
- [bool operator== \(const SafeObject &o\) const](#)
- [bool operator!= \(const SafeObject &o\) const](#)

Protected Attributes

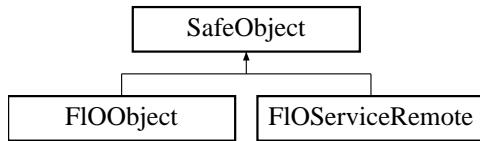

- [SafeObject * object_](#)

The documentation for this class was generated from the following file:

- [common.h](#)

3.15 SafeObject Class Reference

Inheritance diagram for SafeObject::

Friends

- class [pSafeObject](#)

The documentation for this class was generated from the following file:

- common.h

3.16 XMLNode Class Reference

```
#include <xmlwrap.h>
```

Public Member Functions

- `XMLNode (void)`
- `XMLNode (const std::string &name)`
- `XMLNode (const XMLNode &node)`
- `XMLNode (XMLNode &parent, const std::string &name)`
- `operator bool (void) const`
- `bool operator! (void) const`
- `void operator= (const XMLNode &node)`
- `void addNode (const XMLNode &node)`
- `void linkNode (XMLNode &node)`
- `XMLNode * getNode (int n) const`
- `XMLNode * getNode (const std::string &name) const`
- `XMLNode * getNode (const std::string &name, int n) const`
- `int nodes (void) const`
- `std::string name (void) const`
- `void name (const std::string &s)`
- `std::string content (void) const`
- `void content (const std::string &s)`
- `std::string get (void) const`
- `void set (const std::string &s)`

3.16.1 Detailed Description

Wrapper for sophisticated XML management API. Provides very simple, but also very simple to use functionality. There is no separate XML document. Everything is node. This implementation uses libxml2.

3.16.2 Member Function Documentation

3.16.2.1 void XMLNode::operator= (const XMLNode & *node*)

Replace this node with a copy of supplied one. This node becomes a top one.

The documentation for this class was generated from the following file:

- `xmlwrap.h`
