Chapter 3

Data Structure Index

3.1 Data Structures

Here are the data structures with brief descriptions:

ARex::ARexGMConfig	13
ARex::ARexJob	13
ARex::ARexService	17
AuthEvaluator	17
AuthUser	17
AuthVO	17
CacheConfig	18
CacheConfigException	19
Cache::CacheService	19
ArcSec::Charon	21
GridFTP_Commands::close_semaphore_t	21
ContinuationPlugins::command_t	21
CommFIFO	22
gridftpd::ConfigSections	22
ConfigSections	22
ARex::DelegationStore::Consumer	22
ContinuationPlugins	22
ARex::CountedResource	23
gridftpd::Daemon	23
GridFTP_Commands::data_buffer_t	23
DataStaging::DataDeliveryService	
Service for the Delivery layer of data staging	23
ARex::DelegationStore	24
ARex::DelegationStores	24
DirectAccess::diraccess_t	24
DirectAccess	25
DirectFilePlugin	25
DirEntry	25
DREService::DREWebService	25

DTRGenerator	27
DTRInfo	30
CommFIFO::elem_t	30
Entry	30
Exec	31
ARex::FileChunks	
Representation of delivered file chunks	31
ARex::FileChunksList	
Container for FileChunks instances	32
ARex::FileChunksRef	32
FileData	32
FileNode	32
FilePlugin	33
ARex::FileRecord	33
FileRoot	33
GACLPlugin	33

Represents configuration of DTR data staging	56
DREService::Task	57
DREService::TaskQueue	57
DREService::TaskSet	58
DREService::PerlProcessor::ThreadInterface	59
UnixMap::unix_user_t	59
UnixMap	59
gridftpd::UrlMapConfig	59
UrlMapConfig	59
userspec_t	60
value_for_shell	60
voms	60

voms_attrs	61
ZeroUInt	61

Chapter 4

Namespace Documentation

4.1 DREService Namespace Reference

Data Structures

- class [DREWebService](#)
- class [PerlProcessor](#)
- class [Task](#)
- class [TaskQueue](#)
- class [TaskSet](#)

4.1.1 Detailed Description

Implementation of a simple echo service

The reply of the echo service contains the string which was send to it.

Chapter 5

Data Structure Documentation

5.1 ARex::ARexGMConfig Class Reference

The documentation for this class was generated from the following file:

- job.h

5.2 ARex::ARexJob Class Reference

```
#include <job.h>
```

Public Member Functions

- bool [UpdateCredentials](#) (const std::string &credentials)
- bool [ChooseSessionDir](#) (const std::string &jobid, std::string &sessiondir)

Static Public Member Functions

- static int [TotalJobs](#) ([ARexGMConfig](#) &config, Arc::Logger &logger)
- static std::list< std::string > [Jobs](#) ([ARexGMConfig](#) &config, Arc::Logger &logger)

5.2.1 Detailed Description

This class represents convenience interface to manage jobs handled by Grid Manager. It works mostly through corresponding classes and functions of Grid Manager.

5.2.2 Constructor & Destructor Documentation

- 5.2.2.1 [ARex::ARexJob::ARexJob](#) (const std::string & *id*, [ARexGMConfig](#) & *config*, Arc::Logger & *logger*, bool *fast_auth_check* = false)

Create instance which is an interface to existing job

- 5.2.2.2 [ARex::ARexJob::ARexJob](#) (Arc::XMLNode *jsdl*, [ARexGMConfig](#) & *config*, const std::string & *credentials*, const std::string & *clientid*, Arc::Logger & *logger*, [JobIDGenerator](#) & *idgenerator*, Arc::XMLNode *migration* = Arc::XMLNode())

Create new job with provided JSDL description

5.2.3 Member Function Documentation

- 5.2.3.1 bool [ARex::ARexJob::Cancel](#) (void)

Cancel processing/execution of job

- 5.2.3.2 bool [ARex::ARexJob::ChooseSessionDir](#) (const std::string & *jobid*, std::string & *sessiondir*)

Select a session dir to use for this job

5.2.3.3 `bool ARex::ARexJob::Clean (void)`

Remove job from local pool

5.2.3.4 `Arc::Time ARex::ARexJob::Created (void)`

Returns time when job was created.

5.2.3.5 `Arc::FileAccess* ARex::ARexJob::CreateFile (const std::string & filename)`

Creates file in job's session directory and returns handler

5.2.3.6 `bool ARex::ARexJob::Failed (void)`

Returns true if job has failed

5.2.3.7 `std::string ARex::ARexJob::FailedState (std::string & cause)`

Returns state at which job failed and sets cause to information what caused job failure: "internal" for server initiated and "client" for canceled on client request.

5.2.3.8 `std::string ARex::ARexJob::Failure (void) [inline]`

Returns textual description of failure of last operation

5.2.3.9 `bool ARex::ARexJob::GetDescription (Arc::XMLNode & jsdl)`

Fills provided jsdl with job description

5.2.3.10 `std::string ARex::ARexJob::ID (void) [inline]`

Return ID assigned to job

5.2.3.11 `static std::list<std::string> ARex::ARexJob::Jobs (ARexGMConfig & config, Arc::Logger & logger) [static]`

Returns list of user's jobs. Fine-grained ACL is ignored.

5.2.3.12 `std::string ARex::ARexJob::LogDir (void)`

Returns name of virtual log directory

5.2.3.13 `std::list<std::string> ARex::ARexJob::LogFiles (void)`

Returns list of existing log files

5.2.3.14 `Arc::Time ARex::ARexJob::Modified (void)`

Returns time when job state was last modified.

5.2.3.15 `Arc::FileAccess* ARex::ARexJob::OpenDir (const std::string & dirname)`

Opens directory inside session directory

5.2.3.16 `Arc::FileAccess* ARex::ARexJob::OpenFile (const std::string & filename, bool for_read, bool for_write)`

Opens file in job's session directory and returns handler

5.2.3.17 `int ARex::ARexJob::OpenLogFile (const std::string & name)`

Opens log file in control directory

5.2.3.18 `bool ARex::ARexJob::Resume (void)`

Resume execution of job after error

5.2.3.19 `std::string ARex::ARexJob::SessionDir (void)`

Returns path to session directory

5.2.3.20 `std::string ARex::ARexJob::State (void)`

Returns current state of job

5.2.3.21 `std::string ARex::ARexJob::State (bool & job_pending)`

Returns current state of job and sets *job_pending* to true if job is pending due to external limits

5.2.3.22 `static int ARex::ARexJob::TotalJobs (ARexGMConfig & config, Arc::Logger & logger) [static]`

Return number of jobs associated with this configuration. TODO: total for all user configurations.

5.2.3.23 `bool ARex::ARexJob::UpdateCredentials (const std::string & credentials)`

Updates job credentials

5.7 CacheConfig Class Reference

```
#include <conf_cache.h>
```

Public Member Functions

- [CacheConfig](#) (const [GMEEnvironment](#) &env, std::string username="")
- [CacheConfig](#) ()
- void [parseINIConf](#) (std::string username, [ConfigSections](#) *cf)
- void [setCacheDirs](#) (std::vector< std::string > cache_dirs)

5.7.1 Detailed Description

Reads conf file and provides methods to obtain cache info from it.

5.7.2 Constructor & Destructor Documentation

5.7.2.1 `CacheConfig::CacheConfig (const GMEEnvironment & env, std::string username = "")`

Create a new [CacheConfig](#) instance. Read the config file and fill in private member variables with cache parameters. If different users are defined in the conf file, use the cache parameters for the given username.

5.7.2.2 `CacheConfig::CacheConfig () [inline]`

Empty [CacheConfig](#)

5.7.3 Member Function Documentation

5.7.3.1 `void CacheConfig::parseINIConf (std::string username, ConfigSections * cf)`

Parsers for the two different conf styles

5.7.3.2 `void CacheConfig::setCacheDirs (std::vector< std::string > cache_dirs) [inline]`

To allow for substitutions done during configuration

The documentation for this class was generated from the following file:

- `conf_cache.h`

5.8 CacheConfigException Class Reference

```
#include <conf_cache.h>
```

5.8.1 Detailed Description

Exception thrown by constructor caused by bad cache params in conf file

The documentation for this class was generated from the following file:

- `conf_cache.h`

5.9 Cache::CacheService Class Reference

```
#include <CacheService.h>
```

Public Member Functions

- [CacheService](#) (Arc::Config *cfg)
- virtual [~CacheService](#) (void)
- virtual Arc::MCC_Status [process](#) (Arc::Message &inmsg, Arc::Message &outmsg)
- bool [RegistrationCollector](#) (Arc::XMLNode &doc)
- [operator bool](#) ()
- bool [operator!](#) ()

Protected Member Functions

- Arc::MCC_Status [CacheCheck](#) (Arc::XMLNode in, Arc::XMLNode out, const [Job-User](#) &user)
- Arc::MCC_Status [CacheLink](#) (Arc::XMLNode in, Arc::XMLNode out, const [Job-User](#) &user, const Arc::User &mapped_user)

5.9.1 Detailed Description

[CacheService](#) provides functionality for A-REX cache operations that can be performed by remote clients. It currently consists of two operations: [CacheCheck](#) - allows querying of the cache for the presence of files. [CacheLink](#) - enables a running job to dynamically request cache files to be linked to its working (session) directory. This is especially useful in the case of pilot job workflows where job submission does not follow the usual ARC workflow. In order for input files to be available to jobs, the pilot job can call the cache service to prepare them. If requested files are not present in the cache, they can be downloaded by the cache service if requested, using the A-REX downloader utility.

5.9.2 Constructor & Destructor Documentation

5.9.2.1 Cache::CacheService::CacheService (Arc::Config * *cfg*)

Make a new [CacheService](#). Reads the configuration and determines the validity of the service.

5.9.2.2 virtual Cache::CacheService::~~CacheService (void) [virtual]

Destroy the [CacheService](#)

5.9.3 Member Function Documentation

5.9.3.1 Arc::MCC_Status Cache::CacheService::CacheCheck (Arc::XMLNode *in*, Arc::XMLNode *out*, const JobUser & *user*) [protected]

Check whether the URLs supplied in the input are present in any cache. Returns in the out message for each file true or false, and if true, the size of the file on cache disk.

Parameters

<i>user</i>	A-REX user configuration for the mapped user
-------------	--

5.9.3.2 Arc::MCC_Status Cache::CacheService::CacheLink (Arc::XMLNode *in*, Arc::XMLNode *out*, const JobUser & *user*, const Arc::User & *mapped_user*) [protected]

This method is used to link cache files to the session dir. A list of URLs is supplied and if they are present in the cache and the user calling the service has permission to access them, then they are linked to the given session directory. If the user requests that missing files be staged, then a downloader process is launched to obtain them.

Parameters

<i>user</i>	A-REX user configuration for the mapped user
<i>mapped_user</i>	The local user to which the client DN was mapped

5.9.3.3 Cache::CacheService::operator bool (void) [inline]

Returns true if the [CacheService](#) is valid.

5.9.3.4 bool Cache::CacheService::operator! (void) [inline]

Returns true if the [CacheService](#) is not valid.

5.9.3.5 `virtual Arc::MCC_Status Cache::CacheService::process (Arc::Message & inmsg,
Arc::Message & outmsg) [virtual]`

Main method called by HED when [CacheService](#) is invoked. Directs call to appropriate [CacheService](#) method.

5.9.3.6 `bool Cache::CacheService::RegistrationCollector (Arc::XMLNode & doc)`

Supplies information on the service for use in the information system.

- virtual Arc::MCC_Status [process](#) (Arc::Message &inmsg, Arc::Message &outmsg)
- virtual void [receiveDTR](#) (DTR_ptr dtr)
- bool [RegistrationCollector](#) (Arc::XMLNode &doc)

5.21.1 Detailed Description

Service for the Delivery layer of data staging.

This service starts and controls data transfers. It assumes that the files in any request submitted are ready for immediate transfer and so do not need to be resolved or prepared in any way.

It implements DTRCallback to get callbacks when a DTR has finished transfer.

Status codes in results returned:

- OK - successful submission/cancellation

- TRANSFERRING - transfer still ongoing
- TRANSFERRED - transfer finished successfully
- TRANSFER_ERROR - transfer failed
- SERVICE_ERROR - something went wrong in the service itself

An internal list of active transfers is held in memory. After the first query of a finished transfer (successful or not) the DTR is moved to an archived list where only summary information is kept about the transfer (DTR ID, state and short error description). The DTR object is then deleted. This archived list is also kept in memory. In case a transfer is never queried, a separate thread moves any transfers which completed more than one hour ago to the archived list.

Protected Attributes

- Arc::NS [ns_](#)

Static Protected Attributes

- static Arc::Logger [logger](#)

5.28.1 Constructor & Destructor Documentation

5.28.1.1 DREService::DREWebService::DREWebService (Arc::Config * *cfg*)

Constructor which is capable to extract prefix and suffix for the echo service.

5.28.1.2 virtual DREService::DREWebService::~~DREWebService (void) [virtual]

Destructor.

5.28.2 Member Function Documentation

5.28.2.1 Arc::MCC_Status DREService::DREWebService::makeFault (Arc::Message & *outmsg*, const std::string & *reason*) [protected]

Method to return an error. Creates a fault message and returns a status.

Parameters

<i>outmsg</i>	outgoing message
---------------	------------------

Returns

Status of the result achieved

5.28.2.2 virtual Arc::MCC_Status DREService::DREWebService::process (Arc::Message & *inmsg*, Arc::Message & *outmsg*) [virtual]

Implementation of the virtual method defined in MCCInterface (to be found in MCC.h).

Parameters

<i>inmsg</i>	incoming message
<i>inmsg</i>	outgoing message

Returns

Status of the result achieved

5.28.3 Field Documentation

5.28.3.1 Arc::Logger DREService::DREWebService::logger [static, protected]

Arc-intern logger. Generates output into the file specified in the arched configuration file used to invoke arched services.

5.28.3.2 Arc::NS DREService::DREWebService::ns_ [protected]

Class which specifies a XML namespace i.e. "echo". Needed to extract the content out of the incoming message

The documentation for this class was generated from the following file:

- dREWebService.h

5.29 DTRGenerator Class Reference

```
#include <dtr_generator.h>
```

Public Member Functions

- [DTRGenerator](#) (const [JobUsers](#) &users, void(*kicker_func)(void *)=NULL, void *kicker_arg=NULL)
- [~DTRGenerator](#) ()
- virtual void [receiveDTR](#) (DataStaging::DTR_ptr dtr)
- void [receiveJob](#) (const [JobDescription](#) &job)
- void [cancelJob](#) (const [JobDescription](#) &job)
- bool [queryJobFinished](#) ([JobDescription](#) &job)
- bool [hasJob](#) (const [JobDescription](#) &job)
- void [removeJob](#) (const [JobDescription](#) &job)
- int [checkUploadedFiles](#) ([JobDescription](#) &job)

5.29.1 Detailed Description

A-REX implementation of DTR Generator. Note that neither [Janitor](#) nor job migration functionality present in the down/uploaders has been implemented here.

5.29.2 Constructor & Destructor Documentation

5.29.2.1 **DTRGenerator::DTRGenerator** (**const JobUsers & users**, **void(*) (void *) kicker_func** = NULL, **void * kicker_arg** = NULL)

Start up Generator.

Parameters

<i>user</i>	JobUsers for this Generator.
<i>kicker_func</i>	Function to call on completion of all DTRs for a job
<i>kicker_arg</i>	Argument to kicker function

5.29.2.2 **DTRGenerator::~~DTRGenerator** ()

Stop Generator

5.29.3 Member Function Documentation

5.29.3.1 **void DTRGenerator::cancelJob** (**const JobDescription & job**)

This method is used by A-REX to cancel on-going DTRs. A cancel request is made for each DTR in the job and the method returns. The Scheduler asynchronously deals with cancelling the DTRs.

Parameters

<i>job</i>	The job which is being cancelled
------------	----------------------------------

5.29.3.2 **int DTRGenerator::checkUploadedFiles** (**JobDescription & job**)

Utility method to check that all files the user was supposed to upload with the job are ready.

Parameters

<i>job</i>	Job description, failures will be reported directly in this object.
------------	---

Returns

0 if file exists, 1 if it is not a proper file or other error, 2 if the file not there yet

5.29.3.3 **bool DTRGenerator::hasJob** (**const JobDescription & job**)

Query whether the Generator has a record of this job.

Parameters

<i>job</i>	Job to query.
------------	---------------

Returns

True if the job is active or finished.

5.29.3.4 bool DTRGenerator::queryJobFinished (JobDescription & *job*)

Query status of DTRs in job. If all DTRs are finished, returns true, otherwise returns false. If true is returned, the [JobDescription](#) should be checked for whether the staging was successful or not by checking GetFailure().

Parameters

<i>job</i>	Description of job to query. Can be modified to add a failure reason.
------------	---

Returns

True if all DTRs in the job are finished, false otherwise.

5.29.3.5 virtual void DTRGenerator::receiveDTR (DataStaging::DTR_ptr *dtr*) [virtual]

Callback called when DTR is finished. This DTR is marked done in the DTR list and if all DTRs for the job have completed, the job is marked as done.

Parameters

<i>dtr</i>	DTR object sent back from the Scheduler
------------	---

5.29.3.6 void DTRGenerator::receiveJob (const JobDescription & *job*)

A-REX sends data transfer requests to the data staging system through this method. It reads the job.id.input/output files, forms DTRs and sends them to the Scheduler.

Parameters

<i>job</i>	Job description object.
------------	-------------------------

5.29.3.7 void DTRGenerator::removeJob (const JobDescription & *job*)

Remove the job from the Generator. Only finished jobs will be removed, and a warning will be logged if the job still has active DTRs. This method should be called after A-REX has finished PREPARING or FINISHING.

Parameters

<i>job</i>	The job to remove.
------------	--------------------

The documentation for this class was generated from the following file:

- `dtr_generator.h`

5.30 DTRInfo Class Reference

```
#include <dtr_generator.h>
```

Public Member Functions

- [DTRInfo](#) (const [JobUsers](#) &users)

5.30.1 Detailed Description

[DTRInfo](#) passes state information from data staging to A-REX via the defined callback, called when the DTR passes to the certain processes. It could for example write to files in the control directory, and this information can be picked up and published by the info system.

5.30.2 Constructor & Destructor Documentation

5.30.2.1 DTRInfo::DTRInfo (const [JobUsers](#) & *users*)

[JobUsers](#) is needed to find the correct control dir

The documentation for this class was generated from the following file:

- `void Add` (off_t start, off_t csize)
- `bool Complete` (void)
- `void Print` (void)
- `void Release` (void)
- `void Remove` (void)

5.34.1 Detailed Description

Representation of delivered file chunks.

5.34.2 Member Function Documentation

5.34.2.1 void ARex::FileChunks::Release (void)

Release reference obtained through `FileChunksList::Get()` method. This operation may lead to destruction of FileChunk instance hence previously obtained reference must not be used.

5.34.2.2 void ARex::FileChunks::Remove (void)

Relases reference obtained through `Get()` method and destroys its instance. Normally this method to be called instead of `Release()` after whole file is delivered in order to free resources associated with `FileChunks` instance.

The documentation for this class was generated from the following file:

- `FileChunks.h`

- [operator bool](#) (void)
- bool [operator!](#) (void)
- bool [deploy](#) (void)
- bool [remove](#) (void)
- bool [wait](#) (int timeout)
- Result [result](#) (void)

5.61.1 Detailed Description

Class to communicate with [Janitor](#) - Dynmaic Runtime Environment handler.

5.61.2 Constructor & Destructor Documentation

5.61.2.1 [Janitor::Janitor](#) (const std::string & *id*, const std::string & *cdir*, const [GMEEnvironment](#) & *env*)

Creates instance representing job entry in [Janitor](#) database.

Takes id for job identifier and cdir for the control directory of A-Rex. constructor does not register job in the [Janitor](#). It only associates job with this instance.

5.61.3 Member Function Documentation

5.61.3.1 [bool Janitor::deploy](#) (void)

Registers associated job with [Janitor](#) and deploys dynamic RTEs.

This operation is asynchronous. Returned true means [Janitor](#) will be contacted and deployment will start soon. For obtaining result of operation see methods [wait\(\)](#) and [result\(\)](#). During this operation janitor utility is called with command register and optionally deploy.

5.61.3.2 bool Janitor::remove (void)

Removes job from those handled by [Janitor](#) and releases associated RTEs.

This operation is asynchronous. Returned true means [Janitor](#) will be contacted and removal will start soon. For obtaining result of operation see methods [wait\(\)](#) and [result\(\)](#). During this operation janitor utility is called with command remove.

5.61.3.3 Result Janitor::result (void)

Returns true if operation initiated by [deploy\(\)](#) or [remove\(\)](#) succeeded.

It should be called after [wait\(\)](#) returned true.

5.61.3.4 bool Janitor::wait (int timeout)

Wait till operation initiated by [deploy\(\)](#) or [remove\(\)](#) finished.

This operation returns true if operation finished or false if timeout seconds passed. It may be called repeatedly and even after it previously returned true. If no operation is running it returns true immediately.

5.75 gridftp::LdapQuery Class Reference

```
#include <ldapquery.h>
```

Public Types

- enum [Scope](#)

Public Member Functions

- [LdapQuery](#) (const std::string &ldaphost, int ldapport, bool anonymous=true, const std::string &usersn="", int timeout=20)
- [~LdapQuery](#) ()
- void [Query](#) (const std::string &base, const std::string &filter="(objectclass=*)", const std::vector< std::string > &attributes=std::vector< std::string >(), [Scope](#) scope=subtree) throw (LdapQueryError)
- void [Result](#) (ldap_callback callback, void *ref) throw (LdapQueryError)
- std::string [Host](#) ()

5.75.1 Detailed Description

[LdapQuery](#) class; querying of LDAP servers.

5.75.2 Member Enumeration Documentation

5.75.2.1 enum gridftp::LdapQuery::Scope

Scope for a LDAP queries. Use when querying.

5.75.3 Constructor & Destructor Documentation

5.75.3.1 gridftp::LdapQuery::LdapQuery (const std::string &ldaphost, int ldapport, bool anonymous = true, const std::string &usersn = " ", int timeout = 20)

Constructs a new [LdapQuery](#) object and sets connection options. The connection is first established when calling [Query](#).

5.75.3.2 gridftp::LdapQuery::~~LdapQuery ()

Destructor. Will disconnect from the ldapserver if still connected.

5.75.4 Member Function Documentation

5.75.4.1 std::string gridftp::LdapQuery::Host ()

Returns the hostname of the ldap-server.

5.75.4.2 void gridftp::LdapQuery::Query (const std::string & *base*, const std::string & *filter* = "(objectclass=*)" , const std::vector< std::string > & *attributes* = std::vector< std::string >(), Scope *scope* = subtree) throw (LdapQueryError)

Queries the ldap server.

5.75.4.3 void gridftp::LdapQuery::Result (ldap_callback *callback*, void * *ref*) throw (LdapQueryError)

Retrieves the result of the query from the ldap-server.

The documentation for this class was generated from the following file:

- ldapquery.h

5.76 gridftp::LdapQueryError Class Reference

```
#include <ldapquery.h>
```

Public Member Functions

- [LdapQueryError](#) (std::string message)

5.76.1 Detailed Description

[LdapQuery](#) exception. Gets thrown when an error occurs in a query.

5.76.2 Constructor & Destructor Documentation

5.76.2.1 gridftp::LdapQueryError::LdapQueryError (std::string *message*) [inline]

Standard exception class constructor.

The documentation for this class was generated from the following file:

- ldapquery.h

5.77 RunPlugin::lib_plugin_t Union Reference

The documentation for this union was generated from the following file:

- a-rex/grid-manager/run/run_plugin.h

5.85 gridftp::ParallelLdapQueries Class Reference

```
#include <ldapquery.h>
```

5.85.1 Detailed Description

General method to perform parallel ldap-queries to a set of clusters

The documentation for this class was generated from the following file:

- ldapquery.h

5.86 ARex::PayloadBigFile Class Reference

Public Member Functions

- [PayloadBigFile](#) (const char *filename, Size_t start, Size_t end)
- virtual [~PayloadBigFile](#) (void)

5.86.1 Constructor & Destructor Documentation

5.86.1.1 ARex::PayloadBigFile::PayloadBigFile (const char * *filename*, Size_t *start*, Size_t *end*)

Creates object associated with file for reading from it

5.86.1.2 virtual ARex::PayloadBigFile::~~PayloadBigFile (void) [virtual]

Creates object associated with file for writing into it. Use size=-1 for undefined size.

The documentation for this class was generated from the following file:

- a-rex/PayloadFile.h

5.87 Hopi::PayloadBigFile Class Reference

Public Member Functions

- [PayloadBigFile](#) (const char *filename, Size_t start, Size_t end)
- virtual [~PayloadBigFile](#) (void)

5.87.1 Constructor & Destructor Documentation

5.87.1.1 Hopi::PayloadBigFile::PayloadBigFile (const char * *filename*, Size_t *start*, Size_t *end*)

Creates object associated with file for reading from it

5.87.1.2 virtual Hopi::PayloadBigFile::~~PayloadBigFile (void) [virtual]

Creates object associated with file for writing into it. Use size=-1 for undefined size.

The documentation for this class was generated from the following file:

- hopi/PayloadFile.h

5.88 ARex::PayloadFAFile Class Reference

Public Member Functions

- [PayloadFAFile](#) (Arc::FileAccess *h, Size_t start, Size_t end)

5.88.1 Constructor & Destructor Documentation

5.88.1.1 ARex::PayloadFAFile::PayloadFAFile (Arc::FileAccess * *h*, Size_t *start*, Size_t *end*)

Creates object associated with file for reading from it

The documentation for this class was generated from the following file:

- a-rex/PayloadFile.h

5.89 Hopi::PayloadFile Class Reference

```
#include <PayloadFile.h>
```

Public Member Functions

- [PayloadFile](#) (const char *filename, Size_t start, Size_t end)
- virtual [~PayloadFile](#) (void)

5.89.1 Detailed Description

Implementation of PayloadRawInterface which provides access to ordinary file. -
Currently only read-only mode is supported.

5.89.2 Constructor & Destructor Documentation

5.89.2.1 Hopi::PayloadFile::PayloadFile (const char * *filename*, Size_t *start*, Size_t *end*)

Creates object associated with file for reading from it. Use end=-1 for full size.

5.89.2.2 virtual Hopi::PayloadFile::~~PayloadFile (void) [virtual]

Creates object associated with file for writing into it. Use size=-1 for undefined size.

The documentation for this class was generated from the following file:

- hopi/PayloadFile.h

5.90 ARex::PayloadFile Class Reference

```
#include <PayloadFile.h>
```

Public Member Functions

- [PayloadFile](#) (const char *filename, Size_t start, Size_t end)
- virtual [~PayloadFile](#) (void)

5.90.1 Detailed Description

Implementation of PayloadRawInterface which provides access to ordinary file. -
Currently only read-only mode is supported.

5.90.2 Constructor & Destructor Documentation

5.90.2.1 ARex::PayloadFile::PayloadFile (const char * filename, Size_t start, Size_t end)

Creates object associated with file for reading from it. Use end=-1 for full size.

5.90.2.2 virtual ARex::PayloadFile::~~PayloadFile (void) [virtual]

Creates object associated with file for writing into it. Use size=-1 for undefined size.

The documentation for this class was generated from the following file:

- a-rex/PayloadFile.h

5.104 ArcSec::Service_AA Class Reference

```
#include <aaservice.h>
```

5.104.1 Detailed Description

A Service which includes the AttributeAuthority functionality; it accepts the <samlp:-AttributeQuery> which includes the <Subject> of the principal from the request and <Attribute> which the request would get; it access some local attribute database and returns <samlp:Assertion> which includes the <Attribute>

The documentation for this class was generated from the following file:

- aaservice.h

5.105 Arc::Service_JavaWrapper Class Reference

Public Member Functions

- virtual Arc::MCC_Status [process](#) (Arc::Message &, Arc::Message &)

5.105.1 Member Function Documentation

- 5.105.1.1 virtual Arc::MCC_Status Arc::Service_JavaWrapper::process (Arc::Message & , Arc::Message &) [virtual]

Service request processing routine

The documentation for this class was generated from the following file:

- javawrapper.h

5.106 Arc::Service_PythonWrapper Class Reference

Public Member Functions

- virtual Arc::MCC_Status [process](#) (Arc::Message &, Arc::Message &)

5.106.1 Member Function Documentation

- 5.106.1.1 virtual Arc::MCC_Status Arc::Service_PythonWrapper::process (Arc::Message & , Arc::Message &) [virtual]

Service request processing routine

The documentation for this class was generated from the following file:

- pythonwrapper.h

5.107 ArcSec::Service_SLCS Class Reference

```
#include <slcs.h>
```

5.107.1 Detailed Description

A Service which signs the short-lived certificate; it accepts the certificate signing request (CSR) from client side through soap, signs a short-lived certificate and sends back through soap. This service is supposed to be deployed together with the SPService

and saml2sso.serviceprovider handler, in order to sign certificate based on the authentication result from saml2sso profile. Also the saml attribute (inside the saml assertion from saml2sso profile) will be put into the signed short-lived certificate. By deploying this service together with SPService and saml2sso.serviceprovider handler, we can get the conversion from username/password -----> x509 certificate.

The documentation for this class was generated from the following file:

- slcs.h

5.108 SPService::Service_SP Class Reference

```
#include <SPService.h>
```

Public Member Functions

- [Service_SP](#) (Arc::Config *cfg)
- virtual Arc::MCC_Status [process](#) (Arc::Message &, Arc::Message &)

5.108.1 Detailed Description

This is service which accepts HTTP request from user agent (web browser) in the client side and processes the functionality of Service Provider in SAML2 SSO profile --- composing <AuthnRequest> Note: the IdP name is provided by the user agent directly when it gives a request, instead of the WRYF(where are you from) or Discovery Service in other implementation

5.108.2 Constructor & Destructor Documentation

5.108.2.1 SPService::Service_SP::Service_SP (Arc::Config * cfg)

Constructor

5.108.3 Member Function Documentation

5.108.3.1 virtual Arc::MCC_Status SPService::Service_SP::process (Arc::Message & , Arc::Message &) [virtual]

Service request processing routine

The documentation for this class was generated from the following file:

- SPService.h

5.109 SimpleMap Class Reference

The documentation for this class was generated from the following file:

- `simplemap.h`

5.110 AuthUser::source_t Struct Reference

The documentation for this struct was generated from the following file:

5.111 UnixMap::source_t Struct Reference

The documentation for this struct was generated from the following file:

- `unixmap.h`

5.112 StagingConfig Class Reference

```
#include <conf_staging.h>
```

Public Member Functions

- [StagingConfig](#) (const [GMEEnvironment](#) &env)

Friends

- class **DTRGenerator**

5.112.1 Detailed Description

Represents configuration of DTR data staging.

5.112.2 Constructor & Destructor Documentation

5.112.2.1 StagingConfig::StagingConfig (const GMEEnvironment & env)

Load config from configuration file. Information from [JobsListConfig](#) is used first, then it is overwritten by parameters in [data-staging] (for ini style) or new staging parameters in `<dataTransfer>` (for xml style).

The documentation for this class was generated from the following file:

- `conf_staging.h`

5.113 DREService::Task Class Reference

Public Member Functions

- [Task](#) (int taskID, Arc::Message *request, Arc::Message *response)
- virtual [~Task](#) (void)

5.113.1 Constructor & Destructor Documentation

5.113.1.1 `DREService::Task::Task (int taskID, Arc::Message * request, Arc::Message * response)`

Constructor which is capable to extract prefix and suffix for the echo service.

5.113.1.2 `virtual DREService::Task::~~Task (void)` [virtual]

Destructor.

The documentation for this class was generated from the following file:

- `Task.h`

5.114 DREService::TaskQueue Class Reference

Public Member Functions

- [TaskQueue](#) (int length)
- virtual [~TaskQueue](#) (void)
- int [pushTask](#) ([Task](#) *task)
- [Task](#) * [shiftTask](#) ()

5.114.1 Constructor & Destructor Documentation

5.114.1.1 `DREService::TaskQueue::TaskQueue (int length)`

Constructor which is capable to extract prefix and suffix for the echo service.

5.114.1.2 `virtual DREService::TaskQueue::~~TaskQueue (void) [virtual]`

Destructor.

5.114.2 Member Function Documentation

5.114.2.1 `int DREService::TaskQueue::pushTask (Task * task)`

Blocks, if taskqueue is full. If task is stored in the queue and had a taskID == -1 it gets a fresh taskID.

5.114.2.2 `Task* DREService::TaskQueue::shiftTask ()`

Shifts the first task from the queue (and removes it).

The documentation for this class was generated from the following file:

- TaskQueue.h

5.115 DREService::TaskSet Class Reference

Public Member Functions

- [TaskSet](#) (int size)
- `virtual ~TaskSet` (void)
- `Task * removeTask` (int)

5.115.1 Constructor & Destructor Documentation

5.115.1.1 `DREService::TaskSet::TaskSet (int size)`

Constructor which is capable to extract prefix and suffix for the echo service.

5.115.1.2 `virtual DREService::TaskSet::~~TaskSet (void) [virtual]`

Destructor.

5.115.2 Member Function Documentation

5.115.2.1 `Task* DREService::TaskSet::removeTask (int)`

Checks wheter there is a task in the queue having that taskID in order to return it. If such a taskID is not available, the method blocks until such a taskID is available. The task will be removed from the stack in that case.

The documentation for this class was generated from the following file:

- TaskSet.h

5.116 DREService::PerlProcessor::ThreadInterface Struct Reference

The documentation for this struct was generated from the following file:

- PerlProcessor.h

5.124.1 Detailed Description

VOMS attributes

5.124.2 Field Documentation

5.124.2.1 `std::string voms_attrs::cap`

user's capability

5.124.2.2 `std::string voms_attrs::group`

user's group

5.124.2.3 `std::string voms_attrs::role`

user's role

The documentation for this struct was generated from the following file:

- `auth.h`

5.125 ZeroUInt Class Reference

```
#include <job_config.h>
```

5.125.1 Detailed Description

[ZeroUInt](#) is a wrapper around unsigned int. It provides a consistent default value, as int type variables have no predefined value assigned upon creation. It also protects from potential counter underflow, to stop counter jumping to MAX_INT.

The documentation for this class was generated from the following file:

- `job_config.h`
