## 5 globus gsi callback Module Documentation

### 5.1 Activation

Globus GSI Callback uses standard Globus module activation and deactivation.

#### Defines

- #define [GLOBUS\\_GSI\\_CALLBACK\\_MODULE](#)

#### 5.1.1 Detailed Description

Globus GSI Callback uses standard Globus module activation and deactivation.

Before any Globus GSI Callback functions are called, the following function must be called:

```
globus_module_activate(GLOBUS_GSI_CALLBACK_MODULE)
```

This function returns `GLOBUS_SUCCESS` if Globus GSI Callback was successfully initialized, and you are therefore allowed to subsequently call Globus GSI Callback functions. Otherwise, an error code is returned, and Globus GSI Credential functions should not be subsequently called. This function may be called multiple times.

To deactivate Globus GSI Callback, the following function must be called:

```
globus_module_deactivate(GLOBUS_GSI_CALLBACK_MODULE)
```

This function should be called once for each time Globus GSI Callback was activated.

#### 5.1.2 Define Documentation

##### 5.1.2.1 #define GLOBUS\_GSI\_CALLBACK\_MODULE

Module descriptor.

### 5.2 Callback Functions
